## **Software Engineer - Social Network**

*Launched in 2006, Studentis Group is a leading network of online communities with ambitions to be an industry leader in Europe. Through acquisitions Studentis aim to be the natural link between young Europeans and companies seeking contact with this target group. Studentis Group is a privately owned company with strong shareholders with experience from the: online community, retail, internet, international recruitment and branding industries. Studentis Group is an Equal Opportunity Employer.*

### **Job Description**

Studentis Group is seeking a Software Engineer – Social Network to be part of our development team that is creating functions, services and modules for our communities in Drupal. The job involves applying the science of influence to social media. We are looking for the best and brightest talent in web 2.0 related development to support the success of our Community division.

As a key participant in architecting, designing, implementing and debugging our core social analysis engine, you will design and implement advanced algorithms for efficiently analyzing and reporting on networks of millions of nodes covering thousands of topics in near real-time. The analysis engine is highly distributed and tightly integrated with several external and internal systems and databases.

This is an exciting opportunity to undertake a broad range of activities. As part of the Tech Team, you will: manage co-ordination between existing communities, integrate newly acquired communities and more. You will be based in Stockholm or Borås.

### **Responsibilities Include:**

- Specify and develop features for our communities
- Build Drupal functions, modules and features
- Optimize and Scale PHP/MySQL applications beyond where you've probably scaled before
- Create APIs to help with inside and outside developers and programmers
- Lead development projects using internal and outsourced developers

### **Qualifications:**

- BS/MS/Ph.D. in Computer Science, Computer, Software or Electrical Engineering
- Strong foundation in system design, software architecture, web technologies
- Programming wizardry in PHP (Drupal) and Java a must.
- Programming languages (i.e., HTML, CSS, JavaScript, XML, PHP)
- Understanding of Content Management systems and user interface design
- Experience with large-scale information-retrieval systems and integrating with web-based front ends
- Strong knowledge and keen interest in emerging tools and technologies in the industry
- Experience in managing projects, deadlines, communicate clearly to ensure product release and delivery
- Fluency in written and spoken English. Additional languages a plus

Our ideal candidate is diligent and outgoing and excited about getting involved with a rapidly growing internet company. Please include links to any interesting application/material you've developed that might get our attention. Studentis offer great opportunities for the right individuals.

### **Interested candidates are welcome to contact:**
